

VRTX 104002-60GPM,

Specifications

Brand	VRTX
Type	104002-60GPM,
Stock	1

Description

Used VRTX 104002-60GPM,

Used VRTX Water Treatment System type 104002-60GPM, Cooling water is drawn from the Cooling Tower or Evaporative Condenser sump. Velocity, trajectory, and rotation are imparted to create opposing water streams as they leave the precision nozzles. The water collides with tremendous kinetic energy and shear. At the core of these streams, a region of near total vacuum is created which degasses the flow.
