Anwendungsvorteile für Anlagenbauer, Planer und Betreiber

Application benefits for contractors, planners and operators

Verringerter bauseitiger Aufwand

- Geringere Anzahl der Gerätefüße durch Güntner Tragprofile, daher weniger Fundamente notwendig
- Bis 12 m Gerätelänge max. 6 Füße
- Niedrigere Dachlast durch reduziertes Gerätegewicht

Hohe Sicherheit gegen Leckagen

- Bewährtes Güntner Tragrohrsystem
- Bewährte Güntner Tragprofile
- Selbsttragende Gehäusekonstruktion
- Geringe Durchbiegung bei Kran- und Staplertransport
- Verringerte Aufstellverwindung
- Hohe Steifigkeit bei reduziertem Gewicht

Neue Schallabstufungen

Die verbesserten Schallabstufungen der Güntner Verflüssiger gewährleisten optimale Anpassung an schalltechnische Anforderungen.

- Zusätzliche Schallstufe M zwischen N und L, 5 Schallabstufungen statt bisher 4
- Jetzt Geräte mit neuartigen Owllet-Ventilatoren (Ø 800 mm) mit verbessertem Wirkungsgrad und niedrigerem Schalldruckpegel

Umfangreiches Zubehörprogramm

Ermöglicht individuelle Ausführungsvarianten. Güntner Schaltschränke mit Steuer- und Regelkomponenten werden nach höchsten Qualitätsstandards im eigenen Werk gefertigt und sind optimal an Verflüssiger angepasst.

Sparen Sie wertvolle Arbeitszeit durch werkseitig montierte Güntner Schaltschränke!

Weitere Information unter:
www.guentner.de

Less work on site

- Unit has fewer feet due to Güntner supporting profiles, therefore fewer foundations required
- Maximum of 6 feet for units up to 12 m long
- Less roof load due to reduced unit weight

Good protection against leakage

- Güntner's proven floating coil design
- Güntner's tried and tested supporting profiles
- Self-supporting casing structure
- Minimal flexion during crane and forklift transport
- Reduced assembly torsion
- More rigidity with less weight

New noise graduations

The improved sound graduation of the Güntner condensers guarantees maximum compliance with noise regulations.

- Additional noise level M between N and L, 5 sound graduations instead of the previous 4
- Now units are equipped with owl fans (Ø 800 mm) with enhanced efficiency and lower sound pressure level

Wide range of accessories

Allows individual design variants. Güntner switch cabinets with control and regulation components are manufactured in the company's own plant and are made to comply with the highest quality standards. They are specially designed for the use with condensers.

Save precious working time by using factory-installed switch cabinets.

For additional information, consult our website at www.guentner.de.

Nomenklatur / Nomenclature

Güntner Product Calculator die bessere Wahl

Güntner Product Calculator the perfect choice

Für eine **genaue thermodynamische Auslegung** mit anderen Betriebsmitteln (auch für andere Kältemittel, geodätische Höhen und Epoxidharz-beschichtete Lamellen) empfehlen wir die Verwendung des **Güntner Product Calculator**.

Die Software ermöglicht auch die sichere, einfache Auslegung des passenden Schaltschranks mit Steuer- und Regelkomponenten.

We recommend that you use the **Güntner Product Calculator** for an **exact thermodynamic design** in different operating conditions (also for other refrigerants, heights above sea level and epoxy resin coated fins).

The software also renders it possible to produce a safe, simple control panel design including control and regulation components.

Diagramm zur Bestimmung
der Verflüssiger-Nennleistung
(Katalog) in Abhängigkeit
von t_c und t_{L1} bei einer
Heißgasüberhitzung von
 $\Delta t_h = 25 \text{ K}$

$$\dot{Q}_C = \dot{Q}_{CN} \cdot f_N \cdot f_R \cdot f_M \cdot f_H$$

\dot{Q}_C = tatsächliche Leistung
Faktoren für f_M und f_R siehe Seite 3

\dot{Q}_C = actual capacity
Factors for f_M and f_R see page 3

Diagram for calculation of
nominal condensing capacity
depending on t_c and t_{a1} for
hot gas superheating of
 $\Delta t_h = 25 \text{ K}$

Genauere Daten sind nur durch Be-
rechnung über den Güntner Product
Calculator möglich.

Exact data can only be obtained by
using the Güntner Product Calculator.

Umrechnung nur näherungsweise.
Einfluß des Druckabfalls kann nur
mit GPC berücksichtigt werden.

Only approximate conversion values.
Effect of pressure drop can only be
taken into consideration with GPC.

\dot{Q}_N (Heißgastemp./hot gas temp., t_c , t_{L1}/t_{a1} , Unterkühlung/Subcooling, H) → Güntner Product Calculator

n = Anzahl Ventilatoren
n = Number of fans

bei gegenüberliegenden Anschlüssen: Maß „S“ = „R“
connections on both sides: dimension „S“ = „R“

Bei SchwingmetallfüÙen vergrößern sich die AufstellmaÙe „H“ und „C“
When using vibration dampers, the setting-up dimensions „H“ and „C“ (height) increase

Ventilatorabmessungen „D“ und „F“ siehe Tabelle Seite 10
Fan dimensions „D“ and „F“ see table page 10

Schallangaben

Sound specifications

Zur Ermittlung des Schalldruckpegels sind die Schallleistungen der einzelnen Ventilatoren entsprechend der räumlichen Anordnung zu Grunde zu legen und die Schallausbreitung unter Berücksichtigung der örtlichen und räumlichen Verhältnisse zu bestimmen. Schalt-, Anlauf- und Regelgeräusche sind nicht berücksichtigt.

For the calculation of the sound pressure level, take the sound power of the individual fans acc. to their position, and calculate the sound propagation considering the local and ambient conditions. Speed change, start up and control noises are not taken into account.

| Ventilatorotyp Fan type | Drehzahl Speed | | Schallleistungspegel L_{wa} — pro Oktave — pro Ventilator Sound power level L_{wa} — per octave — per fan | | | | | | | | | | | | | | | | L_{wa} total | |

ΔL_{PA} [dB(A)]

Der angegebene Schalldruckpegel ist der (nach EN 13487) rechnerisch ermittelte Schalldruckpegel auf einer zur Referenz umhüllenden in 10 m Abstand parallelen Quaderfläche. Das Nomogramm zur Bestimmung der Schalldruckpegeländerung ΔL_{PA} basiert auf der Änderung des Abstandes d eines quaderförmig umhüllenden Bereiches zu der referenzumhüllenden Quaderfläche. (Standardverfahren zur Berechnung des Schalldruckpegels; Anhang C; EN 13487)

The indicated sound pressure level is based on the calculation (according to EN 13478) of the sound pressure level on the surface of a cuboid area which is at 10 meters distance and parallel to the referential envelope of the sound source. The nomogram for the determination of the difference in the sound pressure level ΔL_{PA} is based on shifting the distance d of the cuboid area in relation to the referential envelope. (standard procedure for the calculation of the sound pressure level; Annex C EN 13487)

GVH / GVV Ausführungen

GVH / GVV Design

V

VI

VII

bei gegenüberliegenden Anschlüssen: Maß „S“ = „R“
connections on both sides: dimension „S“ = „R“

Bei Schwingmetallfüßen vergrößern sich die Aufstellmaße „H“ und „C“
When using vibration dampers, the setting-up dimensions „H“ and „C“ (height) increase

Ventilatorabmessungen „D“ und „F“ siehe Tabelle Seite 28
Fan dimensions „D“ and „F“ see table page 28

VIII

IX

bei gegenüberliegenden Anschlüssen: Maß „S“ = „R“
 connections on both sides: dimension “S” = “R”

Bei Schwingmetallfüßen vergrößern sich die Aufstellmaße „H“ und „C“
 When using vibration dampers, the setting-up dimensions “H” and “C” (height) increase

Ventilatorabmessungen „D“ und „F“ siehe Tabelle Seite 28
 Fan dimensions “D” and “F” see table page 28

Drehzahlregler und Schaltschränke finden Sie im Güntner Katalog und im Güntner Product Calculator, GPC.

You can find speed controllers and switch cabinets in our Güntner catalogue and in the Güntner Product Calculator, GPC.

Schallangaben

Sound specifications

Zur Ermittlung des Schalldruckpegels sind die Schalleistungen der einzelnen Ventilatoren entsprechend der räumlichen Anordnung zu Grunde zu legen und die Schallausbreitung unter Berücksichtigung der örtlichen und räumlichen Verhältnisse zu bestimmen. Schalt-, Anlauf- und Regelgeräusche sind nicht berücksichtigt.

For the calculation of the sound pressure level, take the sound power of the individual fans acc. to their position, and calculate the sound propagation considering the local and ambient conditions. Speed change, start up and control noises are not taken into account.

| Ventilator typ Fan type | Drehzahl Speed | | Schalleistungspegel L_{wa} — pro Oktave — pro Ventilator Sound power level L_{wa} — per octave — per fan | | | | | | | | | | | | | | | | L_{wa} total | |

ΔL_{PA} [dB(A)]

Der angegebene Schalldruckpegel ist der (nach EN 13487) rechnerisch ermittelte Schalldruckpegel auf einer zur Referenz umhüllenden in 10 m Abstand parallelen Quaderfläche. Das Nomogramm zur Bestimmung der Schalldruckpegeländerung ΔL_{PA} basiert auf der Änderung des Abstandes d eines quaderförmig umhüllenden Bereiches zu der referenzumhüllenden Quaderfläche. (Standardverfahren zur Berechnung des Schalldruckpegels; Anhang C; EN 13487)

The indicated sound pressure level is based on the calculation (according to EN 13478) of the sound pressure level on the surface of a cuboid area which is at 10 meters distance and parallel to the referential envelope of the sound source. The nomogram for the determination of the difference in the sound pressure level ΔL_{PA} is based on shifting the distance d of the cuboid area in relation to the referential envelope. (standard procedure for the calculation of the sound pressure level; Annex C EN 13487)

| Summierung der Schalleistungen bei mehreren Ventilatoren. Sum of noise powers in case of several fans. | | | | | | | | |

Verflüssiger-Block Condenser coil

Die kältemittelführenden Kernrohre sind durch die bewährte Güntner Tragrohrkonstruktion entlastet. Dadurch ergibt sich eine erhöhte Sicherheit gegen Undichtigkeit.

Bis GVH/V 065...:
Kernrohre: Kupfer Ø 3/8",
25 × 22 mm versetzt
Lamellen: Aluminium,
Teilung 2,2 mm
Ab GVH/V 080...:
Kernrohre: Kupfer Ø 12 mm,
50 × 25 mm versetzt
Lamellen: Aluminium,
Teilung 2,4 mm
Verteil- und Sammelrohre sowie
Rohranschlüsse in Kupfer
Zulässiger Druck: PS = 32 bar
Zulässige Temperatur: TS = 100 °C

The fluid-carrying core tubes are stressed less due to Güntner's proven floating coil design. This results in increased safety against leakage.

Up to GVH/V 065...:
Core tubes: copper Ø 3/8",
25 × 22 mm staggered
Fins: aluminium,
2.2 mm fin spacing
From GVH/V 080...:
Core tubes: copper Ø 12 mm,
50 × 25 mm staggered
Fins: aluminium,
2.4 mm fin spacing
Header inlets and outlets as well as tube connections made of copper.
Admissible pressure: PS = 32 bar
Admissible temperature: TS = 100 °C

Gehäuse Casing

Stahlblech verzinkt und lackiert,
RAL 7035 (Lichtgrau)

Galvanized steel sheet,
painted to RAL 7035 (light grey)

Ventilatoren Fans

Geräuscharme Axialventilatoren mit wartungsfreien Motoren mit Schutzart IP54, Wärmeklasse 155 und DIN VDE 0530, Wuchtgüte Q 6,3 nach VDI 2060, Schutzgitter gemäß EN 294.
Von GVH/V 045... bis 065...:
Wechselstrom 230 V 1~ 50 Hz,
von GVH/V 080... bis 100...:
Drehstrom 400 V 3~ 50 Hz,
zulässige Lufttemperatur (Einsatzbereich) -30 °C bis +55 °C.

Für GVH/V verwendete Ventilatoren sind drehzahlregelbar mit Güntner Regelgeräten. Drehstromventilatoren können durch Δ-Y-Umschaltung mit 2 verschiedenen Drehzahlen betrieben werden.
Ab GVH/V 080... sind 5 Leistungs- / Schallstufen (N, M, L, S, E) lieferbar.

Wir behalten uns vor, verschiedene Ventilatorfabrikate einzusetzen. Je nach Ventilatorfabrikat können die Motordaten geringfügig abweichen. Die entsprechenden elektrischen Daten müssen dem Typenschild entnommen werden.
Die Maße F und H ändern sich.

Low-noise axial fans with maintenance-free motors with protection class IP 54, thermal class 155 and DIN VDE 0530, quality of balance Q 6,3 acc. to VDI 2060, protection guard acc. to EN 294.
From GVH/V 045... up to 065...:
alternating current 230 V 1~ 50 Hz
from GVH/V 080... up to 100...:
three-phase current 400 V 3~ 50 Hz
admissible air temperature (operative range) -30 °C up to +55 °C.

Fans used in GVH/V can be speed-controlled with Güntner control elements. Three-phase fans can be operated at two speeds (Δ-Y-change-over).
In total, from GVH/V 080... 5 different speed / noise levels are available (N, M, L, S, E).

We reserve the right to use fans from different manufacturers. Depending on the fan type, the motor data may slightly vary. For the corresponding electrical data please refer to the nameplate. Dimensions F and H vary.

Bei höheren Lufttemperaturen und anderen Luftwiderständen verändert sich die Stromaufnahme.
Die Absicherung der Motoren muß über die eingebauten Thermokontakte (Öffner) erfolgen.
Hohe Drehzahl Δ ,
niedere Drehzahl Y .

In case of higher air temperatures and varying air resistance the power input will change.
The integral thermal contacts (thermistors) must be used as motor protection.
High speed Δ ,
low speed Y .

Leistungsangaben Capacity

Die Leistungsangaben gelten für R404A. Die Nennleistungen beziehen sich auf eine Verflüssigungstemperatur $t_c = 40\text{ °C}$, Luft-eintrittstemperatur $t_{L1} \hat{=} t_{umg} = 25\text{ °C}$, Temperaturdifferenz $\Delta t = 15\text{ K}$, geodätische Höhe NN.
Die Messungen entsprechen auch den Normen EN 327 und EN 13487 (Schallangaben).

The nominal capacities refer to a condensation temperature $t_c = 40\text{ °C}$ at an air inlet temperature $t_{a1} \hat{=} t_{sur} = 25\text{ °C}$, temperature difference $\Delta t = 15\text{ K}$, height above sea level NN and are valid for R404A.
Measurements are also in accordance with EN 327 and EN 13487 standards (noise specifications).

Mit unserer Auslegungssoftware **Güntner Product Calculator** erhalten Sie eine **genaue thermodynamische Auslegung** der gewünschten Gerätevariante mit anderen Betriebsbedingungen (auch für andere Kältemittel, geodätische Höhen und Epoxidharz-beschichtete Lamellen).

We recommend that you use our software package **Güntner Product Calculator** for an **exact thermodynamic design** in different operating conditions (also for other refrigerants, height above sea level and epoxy resin coated fins).

Anmerkung Notes

Die Axialverflüssiger sind für die Aufstellung im Freien vorgesehen. Zusätzliche externe Druckverluste wurden nicht berücksichtigt.
Bei längeren Lager- oder Stillstandzeiten sind die Motoren monatlich 2 bis 4 Stunden in Betrieb zu nehmen.

The axial condensers are designed for outdoor operation with no external pressure drops being considered.
In case of long periods of non-operation or storage the motors must be operated every month for 2 – 4 hours.

Zubehör Accessories

(gegen Mehrpreis lieferbar):

- Reparaturschalter
- Schwingungsdämpfer
- Luftführungskanal
- Drehzahlregler
- Werkseitig montierte Schaltschränke
- Flüssigkeitsbehälter unter-/angebaut (ohne Verrohrung)

(available at additional charge):

- Isolator switch
- Vibration dampers
- Air guiding duct
- Speed controller
- Factory-installed switch cabinets
- Liquid receiver below or integrated (without tubing)

Sonderausführungen Special constructions

(gegen Mehrpreis lieferbar):

- Epoxidharz-beschichtete Lamelle
- Gehäuselackierung in DD-Qualität
- Sonderlackierung
- Revisionsöffnungen
- Kreislaufunterteilung
- Unterkühler
- Lamellen aus Kupfer
- Leergehäuse für Verdichter
- Grundrahmen
- Aufklappbare Ventilatorplatten
- Verlängerte Füße (max. 1000 mm)
- Ohne Füße
- Stirn- und Zwischenbleche Edelstahl

(available at additional charge):

- Epoxy resin coated fin
- Casing paint in DD-quality
- Special paint
- Inspection openings
- Multiple circuits
- Subcooler
- Copper fins
- Weather-proof casing for compressor
- Base frame
- Hinged fan plates
- Extra long feet (max. 1000 mm)
- Without feet
- Intermediate and end sheets made from stainless steel
