

■ VLT 6000 HVAC

■ Ordering guide

This section makes it easier for you to specify and order a VLT 6000 HVAC.

■ Choice of frequency converter

The frequency converter should be chosen on the basis of the given motor current at maximum load on the system. The rated output current $I_{VLT,N}$ must be equal to or higher than the required motor current.

VLT 6000 HVAC is available for two mains voltage ranges: 200-240 V and 380-460 V.

■ Mains voltage

Choose mains voltage for 50/60 Hz:

- 200-240 V three-phase AC voltage
- 380-460 V three-phase AC voltage

Mains voltage 200 - 240 V

VLT type	Typical shaft output $P_{VLT,N}$		$I_{VLT,N}$ [A]	Max continuous output power at 240 V $S_{VLT,N}$ [kVA]
	[kW]	[HP]		
6002	1.1	1.5	6.6	2.7
6003	1.5	2.0	7.5	3.1
6004	2.2	3.0	10.6	4.4
6005	3.0	4.0	12.5	5.2
6006	4.0	5.0	16.7	6.9
6008	5.5	7.5	24.2	10.1
6011	7.5	10	30.8	12.8
6016	11	15	46.2	19.1
6022	15	20	59.4	24.7
6027	18.5	25	74.8	31.1
6032	22	30	88.0	36.6
6042	30	40	115/104*	43.2
6052	37	50	143/130*	54.0
6062	45	60	170/154*	64.0

* The first figure is for a motor voltage of 200-230 V.

The next figure is for a motor voltage of 231-240 V.

Mains voltage 380 - 415 V

VLT type	Typical shaft output $P_{VLT.N}$		Max continuous output current $I_{VLT.N}$ [A]	Max continuous output power at 400 V $S_{VLT.N}$ [kVA]
	[kW]	[HP]		
6002	1.1	1.5	3.0	2.2
6003	1.5	2.0	4.1	2.9
6004	2.2	3.0	5.6	4.0
6005	3.0	-	7.2	5.2
6006	4.0	5.0	10.0	7.2
6008	5.5	7.5	13.0	9.3
6011	7.5	10	16.0	11.5
6016	11	15	24.0	17.3
6022	15	20	32.0	23.0
6027	18.5	25	37.5	27.0
6032	22	30	44.0	31.6
6042	30	40	61.0	43.8
6052	37	50	73.0	52.5
6062	45	60	90.0	64.7
6075	55	75	106	73.0
6100	75	100	147	102
6125	90	125	177	123
6150	110	150	212	147
6175	132	200	260	180
6225	160	250	315	218
6275	200	300	368	255

Mains voltage 440 - 460 V

VLT type	Typical shaft output $P_{VLT.N}$		Max continuous output current $I_{VLT.N}$ [A]	Max continuous output power at 460 V $S_{VLT.N}$ [kVA]
	[kW]	[HP]		
6002	1.1	1.5	3.0	2.4
6003	1.5	2.0	3.4	2.7
6004	2.2	3.0	4.8	3.8
6005	3.0	-	6.3	5.0
6006	4.0	5.0	8.2	6.5
6008	5.5	7.5	11.0	8.8
6011	7.5	10	14.0	11.2
6016	11	15	21.0	16.7
6022	15	20	27.0	21.5
6027	18.5	25	34.0	27.1
6032	22	30	40.0	31.9
6042	30	40	52.0	41.4
6052	37	50	65.0	51.8
6062	45	60	77.0	61.3
6075	55	75	106	84.5
6100	75	100	130	104
6125	90	125	160	127
6150	110	150	190	151
6175	132	200	240	191
6225	160	250	302	241
6275	200	300	361	288

■ Enclosure

VLT 6000 HVAC is available with the following enclosures:

- IP 00:	30 to 45 kW / 200-240 V
- IP 00:	55 to 200 kW / 380-460 V
- Bookstyle IP 20:	1.1 to 3.0 kW / 200-240 V
- Bookstyle IP 20:	1.1 to 7.5 kW / 380-460 V
- IP 20:	1.1 to 45 kW / 200-240 V
- IP 20:	1.1 to 200 kW / 380-460 V
- IP 54:	1.1 to 45 kW / 200-240 V
- IP 54:	1.1 to 200 kW / 380-460 V

IP 00: This enclosure is only available for the larger power sizes of the VLT 6000 HVAC series. It is recommended for installation in standard cabinets.

IP 20 Bookstyle: This enclosure is designed for cabinet installation. It takes up a minimum of space and can be fitted side-by-side without installation of extra cooling equipment.

IP 20: This enclosure is used as standard enclosure for VLT 6000 HVAC. It is ideal for cabinet installation in areas where a high degree of protection is required. This enclosure also permits side-by-side installation.

IP 54: This enclosure can be fitted direct to the wall. Cabinets are not required. IP 54 units can also be installed side-by-side.

■ RFI filter

As standard, the VLT 6000 HVAC has an integral RFI filter up to and including 7.5 kW (3 kW 200 V).

These RFI filters comply with EMC standards EN 55011-1A, provided max. 150 m screened/armoured cable is used, and with EN 55011-1B, provided 50 m screened/armoured cable is used (Bookstyle max. 20 m screened/armoured).

Select a RFI filter for dampening of interference in accordance with EN 55011-1A and EN 55011-1B.

■ Harmonic filter

The harmonic currents do not directly affect the electricity consumption, but they do increase the heat losses in the installation (transformers, cables). That is why in systems with a rather high percentage of rectifier load it is important to keep the harmonic currents at a low level in order to avoid transformer overloads and high cable temperatures.

As standard, the VLT 6000 HVAC has coils in the intermediate circuit in order to ensure low harmonic currents. This typically reduces the input current I_{RMS} by 40 %.

■ Control unit (LCP)

The VLT 6000 HVAC is available with or without control unit (LCP); however, IP 54 units always come with the control unit.

This control unit makes up a complete interface for control and programming of the VLT 6000 HVAC. The control panel is detachable and may - as an alternative - be mounted up to 3 metres away from the VLT frequency converter, i.e. in a cabinet, by means of a fitting kit delivered with the unit.

Data information is given in a 4-line alpha-numerical display, which under normal operation is able to continuously show four operating data items and three operating modes. During programming, all the information required for quickly and efficiently setting up VLT frequency converter parameters will be shown.

As a supplement to the display, there are three indicator lamps for voltage (ON), warning (WARNING) and alarm (ALARM).

All VLT frequency converter parameter Setups can be changed directly via the control panel.

The following options are available:

- Control panel LCP (only for IP 20 units).
- LCP remote-mounting kit for remote control of IP 00 and IP 20 units.
- LCP remote-mounting kit for remote control of IP 54.
- 3 metre cable for LCP.

■ Fieldbus protocols

Danfoss VLT frequency converters are able to fulfil many different functions in an automated building management system. The VLT frequency converter can be integrated directly in an overall monitoring system.

This means that detailed process data can be transmitted via serial communication. The protocols listed below are based on a RS 485 bus system with a maximum transmission speed of 9600 bauds.

As standard, the following protocols are supported:

- Danfoss FC protocol
- Johnson's Control Metasys N2
- Landis & Staefa FLN

A frequency converter can be set and applied in all building management control systems.

Status messages, warnings and alarms provide valuable assistance in visualising and assessing processes.

■ Fieldbus options

The increasing need for information in building management systems makes it necessary to collect or visualise many different types of process data. Important process data can help the system technician in the day-by-day monitoring of the system, which means that a negative development - e.g. an increase in energy consumption - can be rectified in time.

The substantial amount of data in large buildings may generate a need for a higher transmission speed than 9600 baud. Danfoss VLT 6000 HVAC is available with LonWorks® or Profibus®, both of which have higher performance than standard integrated serial communication.

■ Profibus

Profibus is a fieldbus system with FMS and DP, which can be used for linking automation units, such as sensors and actuators, to the controls by means of a two-conductor cable.

Profibus **FMS** is used if major communication tasks are to be solved at cell and system level by means of large volumes of data.

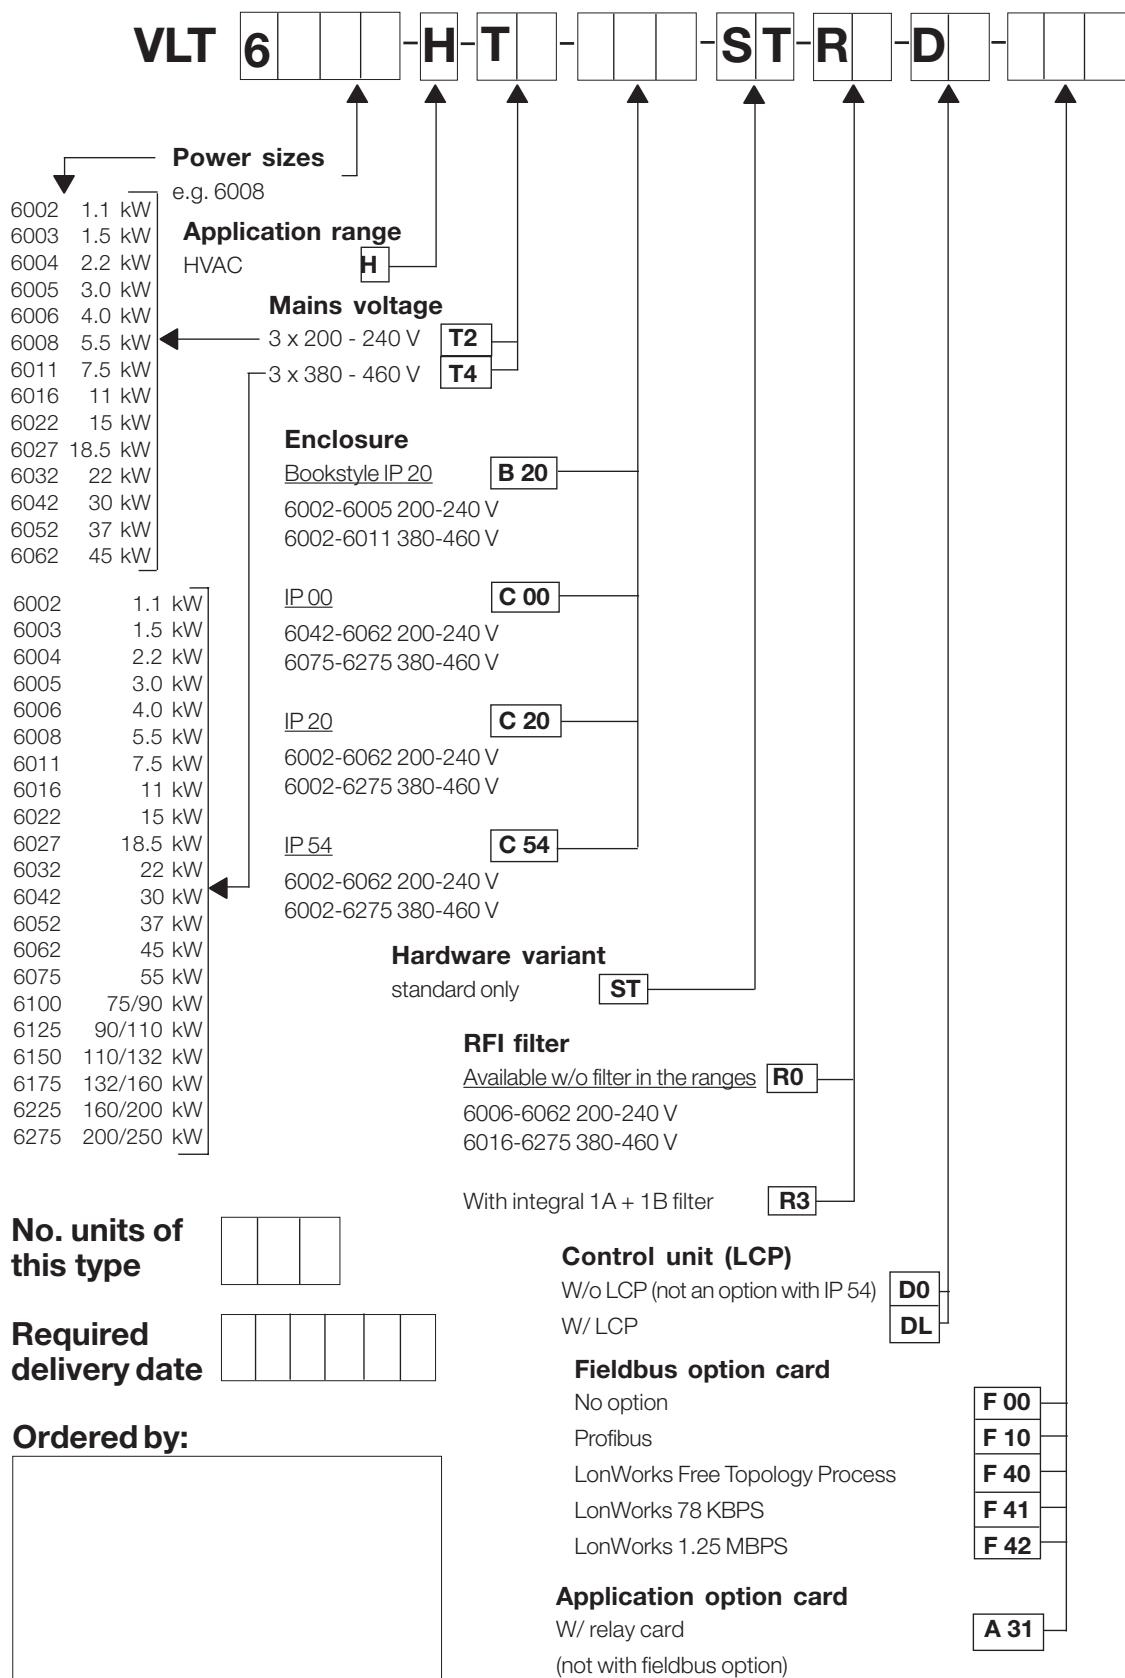

Profibus **DP** is an extremely fast communication protocol, made specially for communication between the automation system and various units.

■ LON - Local Operating Network

LonWorks is an intelligent fieldbus system which improves the possibility of decentralising control, as communication is enabled between individual units in the same system (Peer-to-Peer).

This means that there is no need for a big main station for handling all the signals of the system (Master-Slave). Signals are sent direct to the unit that needs them via a common network medium. This makes communication much more flexible and the central building state control and monitoring system can be changed into a dedicated building state monitoring system whose task is to ensure that everything is running as planned. If the potential of LonWorks is fully utilised, sensors will also be connected to the bus, which means that a sensor signal can quickly be moved to another controller. If room dividers are mobile, this is a particularly useful feature.

Two feedback signals can be linked to the VLT 6000 HVAC by means of LonWorks, thereby enabling the internal PID regulator to regulate directly on the bus feedback.

■ Ordering form VLT 6000 HVAC

Date: _____

Take a copy of the ordering forms. Fill them in and send or fax your order to the nearest office of the Danfoss sales organisation.

■ LC filters VLT 6008-6032, 200 - 240 V / 6016-6062 380 - 460 V

The table and the drawing give the measurements of IP 00 LC filters for Compact units.

IP 00 LC filters must be integrated and protected against dust, water and corrosive gases.

Max. motor cable length:

- 150 m screened/armoured cable

- 300 m unscreened/unarmoured cable

If EMC standards are to be complied with:

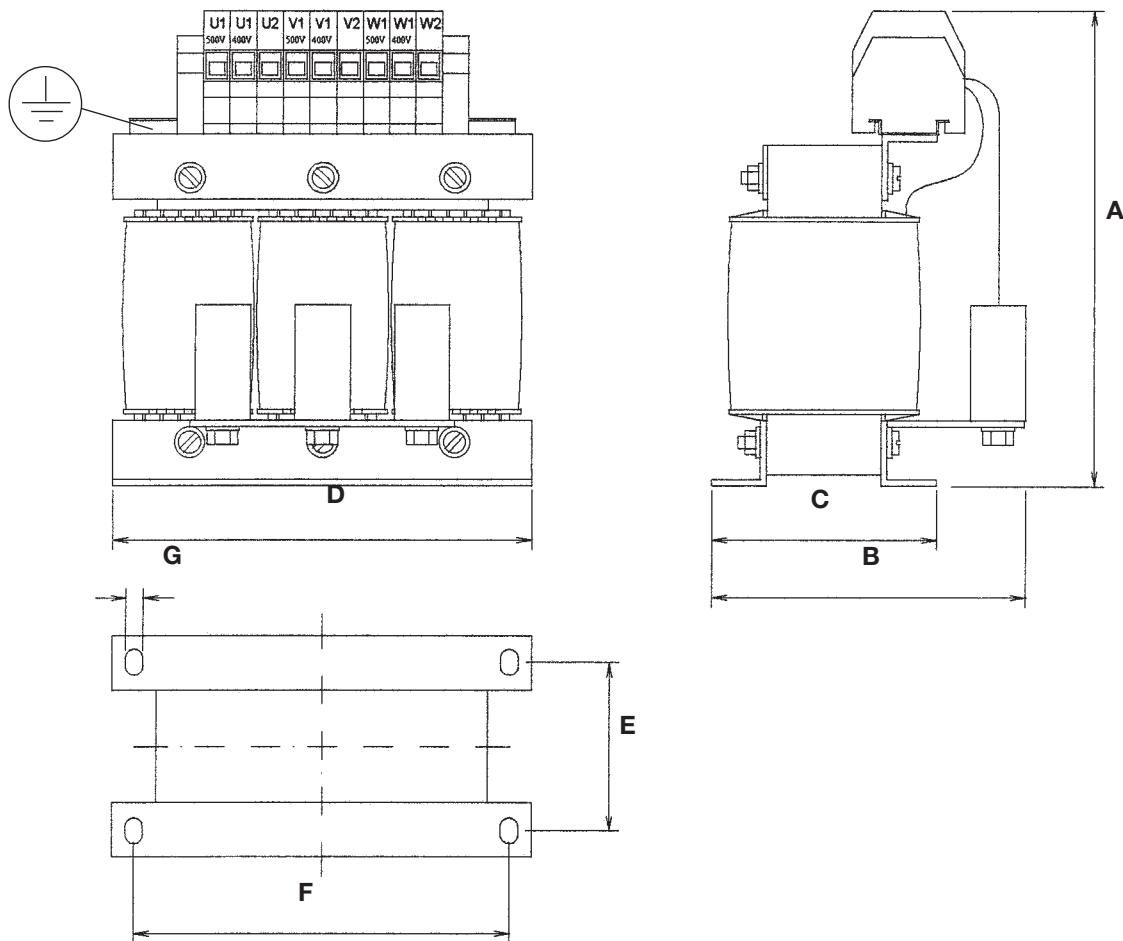

- EN 55011-1B: Max. 50 screened/armoured cable

Bookstyle: Max. 20 m screened/armoured cable

- EN 55011-1A: Max. 150 m screened/armoured cable

LC filter IP 00

- If UL/cUL is to be complied with, pre-fuses type Bussmann KTS-R or similar must be used. Pre-fuses type gG must be used for VLT 6002 - VLT 6032, 200/240 V and VLT 6002 - VLT 6062, 380/460 V. Pre-fuses type gR must be used for VLT 6042 - 6062, 200/240 V and VLT 6075 - VLT 6275, 380/460 V. The fuses must be placed to protect a circuit capable of supplying max. 100,000 amps rms (symmetrical), 500 V maximum.
- American Wire Gauge.
- Measured using 30 m screened motor cable at rated load and rated frequency.
- Min. cable cross-section is the smallest cable cross-section allowed to be fitted on the terminals.
Always comply with national and local regulations on min. cable cross-section.
